

GENIUS the double feature

2 systems in 1: multi line auto attendant and CD-based music on hold, superior sound quality, wear free

Multi-line!

GENIUS serves up to 2, 3 or 4 callers simultaneously (GENIUS 200, 300 or 400)

Top Entertainer!

While on-hold, callers hear music of your choice and individually recorded messages

For a successful business, efficient and friendly handling of incoming telephone calls is a must. Customers are unlikely to accept long delays before their call is answered or extensive waiting time on hold for "Mr. Right".

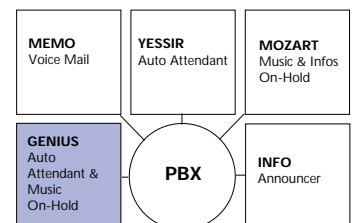

Meet *GENIUS*, the second generation call processing system!

GENIUS combines two popular call handling functions in one elegant stand-alone unit: The Automatic Attendant answers up to 4 calls simultaneously, greets the callers with your recorded announcement and connects them with the desired extension or the switchboard operator.

The Music & Information on hold function sets in during a call transfer initiated either by *GENIUS* or the operator.

GENIUS includes an integrated CD player, from which the desired title is loaded into solid state memory for wear-free playback. Your individual messages, recorded via the handset or via line input, blend softly into the music (2-track technology; music and message can be updated separately!)

After business hours, *GENIUS* can act as an answering machine (outgoing message only)

GENIUS versions

GENIUS 200

2 telephone lines

GENIUS 300

3 telephone lines

GENIUS 400

4 telephone lines

Delivered Items

GENIUS

Owner's Guide

Automatic Attendant

Multi-line: 2, 3 or 4 lines

Announcement recording via handset or *Line* input

All callers hear announcement from the beginning

Call transfer: caller initiated (DTMF) or automatic at end of announcement

After hours answering machine (announcement only)

Music and Information on hold

Continuous playback of user-selectable music and user-recordable information

Wear-free operation (solid-state memory, six minutes)

High quality playback (64k bits/s digitization)

Integrated CD-player for download of music into memory

Separate message memory (2-track technology) for separate update of music and messages

Music and messages blend automatically during playback

All recordings from CD, handset or *Line* input

Three short titles and multilingual hold messages stored in permanent memory (plug and play)

Telephone Connections

GENIUS connects easily to any PBX (switchboard)

Automatic attendant function operates on up to 2 (GENIUS 200), 3 (GENIUS 300) or 4 (GENIUS 400) extension lines. Two, three or four telephone cords, terminated with plugs corresponding to relevant national standards, are included with each unit.

Music and information on hold function operates with the M-O-H input of most PBX models. 600 ohms and 8 ohms outputs. Cable included.
