

YESSIR the friendly lines

multi-line auto attendant, transfer to extensions, departments, day and night modus

Multi-line!

YESSIR eliminates waiting time for incoming calls by serving 2, 3, or 4 callers simultaneously (YESSIR 200, 300 or 400)

Day and Night Service:

YESSIR greets and transfers calls during the day, plays a separate night message after office hours

Inefficient handling of incoming calls leads to direct business losses and poor company image! An incoming call is often a customer "knocking" at your company's door. A busy switchboard causes extensive delays, making the caller "wait outside" (or take his business to a competitor).

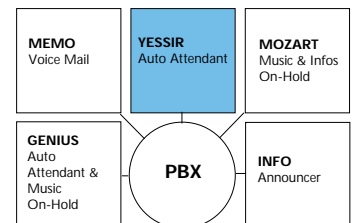

Meet YESSIR the advanced "automatic operator"!

YESSIR automatically answers incoming telephone calls with a recorded greeting before transferring them to the switchboard (or any other user-programmable extension). In case of call overflow, the call can again be rerouted to YESSIR, thus creating a "waiting queue" and keeping the caller informed. Callers feel comfortable and know that they will be attended to shortly.

Another popular YESSIR application is announcing up-to-date company information (hotel booking status, cinema ticket availability, wholeseller "hot item" prices, etc.).

Callers who only require that information will hang up, thus freeing the switchboard to individually serve other calls.

After office hours, YESSIR can act as an answering machine (announcements only). It works with any PBX and is extremely simple to install and handle.

YESSIR versions

YESSIR 200

2 telephone lines

YESSIR 300

3 telephone lines

YESSIR 400

4 telephone lines

Delivered items
