

# MOZART-CD the classic of tomorrow

on-hold music and information, integrated CD-player, 2 soundtracks (music & message), wear-free operation

## Great sound!

High quality, wear-free playback of your favorite CD's from digital memory.

## Two Soundtracks!

Your individually recorded message blends softly into the background music.

*MOZART-CD* is the ultimate on-hold solution for today's competitive business environment.

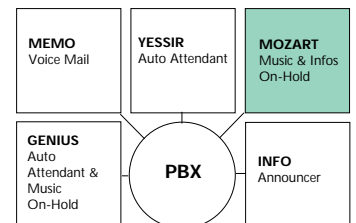

You can provide your waiting customers with the newest in music entertainment, combined with an individual message or perhaps a promotion of your products or services.

*MOZART-CD* offers sound quality superior to most on-hold models: the system includes an integrated CD-player, from which the desired title is loaded into solid state memory (high-resolution digitization) for wear-free playback.

Another advanced *MOZART-CD* feature enables you to record your own messages via the system's handset (if you prefer to use a professional recording, a cassette can be downloaded via the *Line* input).

The messages are stored in a separate memory and blend softly into the music (two track playback). This way, music and messages can be updated separately.

*MOZART-CD* is delivered with several short music titles and multilingual on-hold messages stored in memory; you can use them with or without your own sound material.

## MOZART-CD Features

Continuous playback of user selectable music and user recordable information

Wear-free operation (solid-state memory, *MOZART-CD4* or *MOZART-CD6*: four or six minutes)

High quality playback (64k bits/s digitization)

Integrated CD-player for download of music into memory

Separate message memory (2-track technology) for separate update of music and messages

Music and messages blend automatically during playback

All recordings from CD, handset or *Line* input

Three short music titles and multilingual hold messages stored in permanent memory (plug and play)

Easy to install and operate
