

MORE MOBILITY WITH PERFECT AVAILABILITY

Teleserver  
**Mobile Pro**

Transfer calls with the mobile phone for quick and easy customer service.

RELEASE 3

PBX GOES MOBILE

*Mobile phones become extensions*

You are available everywhere at one extension number, providing customers and partners with perfect service. Convenient and easy to use, Teleserver Mobile Pro creates more efficiency in your daily mobile life.

# EVERY MESSAGE ALSO AS AN E-MAIL

## *Mobile availability for excellent customer service*

Turn your cellular phone into a mobile extension and an assistant. You are available everywhere at your extension number, processing calls immediately, transferring calls to colleagues, and quickly setting up conference calls. You easily change settings, e.g., you switch call forwarding on and off, quickly and free of charge while travelling.

## *One current mailbox for everything*

Only one voice-mailbox / mobile-mailbox informs you of all voice messages which you can also conveniently hear per mouse click on the PC. Mobile Pro supports many voice mail systems already in place as well as your mobile phone mailbox.

## *Information everywhere*

No customer inquiry is overlooked. With the Memo function, you can record telephone conversations. These recordings are simply sent to a voice mailbox or mobile phone mailbox. Additionally, the information can also be sent to any e-mail mailbox (Wave-Attachment).

WORLDWIDE OPERATING RANGE

Teleserver  
**Mobile Pro**

***Easy to reach  
on company premises***

You are available on the premises anytime anywhere at your fixed-line number. An economical and easy-to-implement alternative to a DECT system.

***Mobile communication  
cost-effective and transparent***

Choose the right network for communication with your mobile phone via Teleserver Mobile Pro, saving on costs, especially in foreign networks or via the Call Back function while abroad.

The Call Back function also enables staff members to use their privately-owned mobile phones for company communication. Private and business calls are easily separated.

**e Pro**

FEATURES

- Functions with the mobile: hold, transfer and alternate between calls, conference calls
- Conference calls with more than three participants
- Phone number transmittal supported (depending on network provider)
